

"With high expectations exceeded on the installation, I would not hesitate to recommend KLG to anybody."

Mr B Wilson, Edwalton

### Customer satisfaction is paramount

One of the greatest strengths at KLG is that our experienced workforce will see the job through from start to finish. From survey to installation of the finished product, the entire job is carried out "in house" and will not be regarded as completed until the customer is totally satisfied.

In addition to our warranty certificate which is issued with each and every job, to promote continuous improvement and ensure continued client satisfaction, all of our customers are issued with a questionnaire for completion.

As you can imagine with thirty five years of trading we have many thousands of satisfied customers and you are welcome to view these questionnaires at any time.

Don't take our word for it – see what some of our previous clients have to say about their experiences with KLG.

"Good Service, and products, excellent Fixing Team; we are really pleased with the finished result." Mr & Mrs Allen, Nuthall

"Very pleased, a job well done, area left clean and tidy.

The fitters were a credit to your Company." Mr & Mrs Chapman, Southwell

# Conservatories

## Inside out

A new conservatory can provide you with that feeling of outside freedom and inside comfort all year round. Watch the seasons come and go in the comfort of your new room and enjoy the garden whatever the climate. Enjoy the freedom of space and the endless sky as you look through your walls and ceiling.

A KLG conservatory is so highly specified with quality build and finishing touches it becomes an integral part of your home.

## Timeless Designs

KLG can provide you with various styles of conservatory to satisfy your requirements whilst at the same time sympathising with the style of your home.

When you have requested a site visit, we will arrive with no fixed ideas, listen closely to your requirements and try to provide you with the most practical solution within your budget.

All of our conservatories are bespoke and our experienced sales team will work with you to design the conservatory and help with any planning requirements if necessary.

### Victorian

The Victorian style has a faceted projection which gives a distinctive and soft feel to the conservatory. Available in 3 or 5 faceted versions, a Victorian style conservatory will extend gently into your garden space.

### Edwardian

This conservatory provides all the character of the Victorian but maximises the available living space. This stylish conservatory is often the most appropriate way to extend your home.

### P-Shape

This conservatory allows you to create multi-functional spaces that will look as impressive from the outside as they do within.

It can be manufactured in the usual conservatory styles: Victorian, Edwardian and Gable Ended with the leg of the P-Shape fished as a Lean-To or hipped.

If you have the garden space for this conservatory it will provide the greatest freedom to create the space you dream of.

### Gable Ended (Pavillion)

A wonderful simple style conservatory with its very own distinctive elegance providing additional light and a great feeling of space.

## Good Practice

Any structure is only as good as the foundations it is built upon. Whatever the condition of the ground we have a build solution at hand. Unless there is evidence of poor subsoil condition a traditional strip or trench fill foundation will be used to support the wall construction.

Where there is evidence of poor subsoil other solutions including Raft or Pile Foundations may be utilised.

A KLG conservatory will not only have an insulated base and wall structure but will incorporate the same security features associated with our extensive range of quality windows and doors.

The Eurocell Pinnacle Roof system will be manufactured and assembled in our factory prior to installation ensuring all glass or polycarbonate will fit at the time of installation.

Designed and manufactured to stand the test of time the BBA accreditation guarantees a life expectancy of at least 25 years.

The roofing system is an exact colour match to the windows and doors whether you choose the traditional white, cream or wood grained foil products.
